Radon in Idaho homes

Radon is a naturally occurring radioactive gas that comes from the breakdown of uranium in the soil. It is odorless, tasteless, and invisible. High levels of radon have been found in every county in the state. Visit www.radonidaho.org for an interactive map of radon levels by zip code.

Radon testing is easy

Testing is the only way to know if there is radon in your home.

Do-it-yourself test kits are easy to use and affordable. You can order short or long-term tests at www.radonidaho.org or purchase a test from a local hardware store.

Hire a professional to test your home. Visit www.radonidaho.org for a list of nationally certified radon professionals.

2 OUT OF 5
HOMES
IN IDAHO
HAVE HIGH
RADON
LEVELS

4.0 pCi/L and Higher

Fix your home!

Homeowners can do this themselves or they can hire a radon professional.

2.0 - 3.9 pCi/L

Consider running a long-term radon test. Consider fixing your home.

0.4 - 1.9 pCi/L

No action recommended.

Radon levels can change over time, test every 2 years or after remodeling.

*pCi/L is picocuries per liter and is the standard unit for radon measurements

Radon testing
is easy,
affordable,
and could save
your life!
